Project Purpose:-

Toy libraries are like special places in neighborhoods where kids can borrow lots of different toys to play with. They have all kinds of toys, which help kids use their imagination and learn new things while having fun. These libraries are good because families can save money by borrowing toys instead of buying them. They also teach kids about sharing and taking care of things that belong to everyone. Sometimes, they organize events where families can come together and have fun. Toy libraries are also good for the environment because they help reduce waste by letting people borrow toys instead of always buying new ones. Overall, toy libraries are important because they help kids learn and have fun, bring families together, and are good for the planet.

I. Access to a Variety of Toys:-

Toy libraries provide access to a wide range of toys that children can borrow or play with during library visits. This variety allows children to explore different types of toys, fostering creativity, imagination, and cognitive development.

II. Cost-effective Play:-

Toys can be expensive, and children can quickly outgrow them or lose interest. Toy libraries offer a cost-effective solution by allowing families to borrow toys instead of purchasing them outright. This saves money for families while still providing children with access to toys.

III. Support for Child Development:-

Toys play a crucial role in child development by stimulating various aspects such as cognitive, social, emotional, and physical skills. Toy libraries curate toys that are developmentally appropriate and can support children in

their growth and learning.

IV. **Inclusion and Accessibility:-**

Toy libraries aim to be inclusive spaces where children from diverse backgrounds can access toys regardless of their socio-economic status. This helps in reducing disparities in access to resources and promotes equality of opportunity among children.

Project Modules:-

1. Customer Module-

a) Module Overview:

The Customer Management Module allows customers to create and manage their profiles. Customers can update their personal information and conveniently access their order history.

b) Key Features

- Profile Creation: Customers can create individual profiles, enabling them to save preferences and track their interactions with the system.
- Profile Management: Customers have the ability to update and modify their personal information, ensuring accurate and up-to-date records.

2. Admin Module

a) Module Overview:

The Admin module manages all profiles and handles the product renting.

Without admin permission no can get subscription. Admin is manage all the things.

b) Key Features

- Profile Management:-

The admin manage the customer profile . Without admin permission customer don't get their Profile.

- Product Management:

Admin have the capability to add, update, and display Products with details such as name, description, and images.

3. Product Module-

a)Module Overview:

The Product is responsible for the comprehensive management of products

Products are given by their category

- b)Key Features: 1. Multiple products you can rent
2. multiple categories to sort your product required

3. Rent Module

a) Module Overview:

The Order Module handles the entire Rent process, ensuring a smooth experience for both customers

b) Key Features:

- Customer Renting: Customers can rent a product , enter a renting period and rent a product

4.Feedback Module-

a) Module Overview:

Customer can give feedback on basis of their experience

5. Login Module

c) Module Overview:

The Login Module is responsible for user authentication and access control, ensuring a secure and personalized experience for both Customer and Admin.

d) Key Features

- Secure Login Functionality: The module provides secure login functionality for customers and vendors, safeguarding their accounts and

sensitive information.

User Registration Page:-

List of User Interfaces & its description:

1. Customer Registration Interface:

- Description: This interface allows new customers to create accounts by providing necessary details such as name, email, and password.
- Purpose: To onboard new customers into the system, enabling them to access personalized features and services.

2. Customer Login Interface:

- Description: The login interface prompts customers to enter their credentials (email/username and password) for authentication.
- Purpose: To securely authenticate customers and grant access to their personalized profiles and functionalities.

3. Customer Profile Interface:

- Description: This interface displays and allows customers to manage their personal information, preferences, and order history.
- Purpose: To provide customers with a centralized location to view and update their account details and track their order history.

4. Product Interface

- Description: This interface showcases the products by category
- Purpose: To present customers with a images of the products

5. Rent Interface-

- Description: The Rent interface displays the items selected by the customer for renting along with Starting and Ending date of renting
- Purpose: To allow customers to review and manage their selected items before proceeding to rent

6.

6. User Management Interface:

- Description: This interface is used by administrators to manage user accounts, including creation, modification, and access control.
- Purpose: To empower administrators in maintaining the security and integrity of user accounts within the system.

7. Feedback Interface- The feedback interface allows user to send feedback or give suggaation on basis of their experienc
